Summary

Front-end Engineer with 9 years of experience in building and maintaining responsive applications. Proficient in HTML5, CSS, Javascript, Typescript, Angular, and other modern libraries and frameworks. Experienced lead with a proven track record in overseeing multiple features, implementing security measures, collaborating with other teams for successful integrations, leading testing efforts, and streamlining team processes.

Skills

Angular | Typescript | Javascript | HTML | CSS | SASS | Tailwind CSS | RxJS | Storybook | Cypress | Jasmine | Jest | React | NgRX | Nx MonoRepo | Git | GCP | CI/CD | Node.js | Java | Spring Boot | PostgreSQL | RESTful APIs | Agile | Apigee

Experience

MyBudget

Taguig City, Philippines

Senior Frontend Developer

March 2025 - Present

- Supported multiple Angular and React applications of the organization, including internal tools, and played a major role in successfully onboarding these applications for Australia and New Zealand clients from Kubernetes configurations and actual frontend feature development to Firebase app integration.
- Spearheaded the component test creation for shared components using Storybook and Playwright to allow test components in isolation within a real browser environment, to immediately get feedback during development, and to ensure that components function as expected, including their styling and interactions.
- Migrated shared components from Input, Output, View, and Content query decorators to Signals and updated the app's state management solution to NGRX SignalStore to enhance the app's change detection, reduce unnecessary service calls, and remove complex prop drilling, which impacts the overall performance of the app.
- Made improvements in developer experience by setting up the husky library to automate manual and repetitive processes like adding JIRA IDs to the commit message and running lint checks before committing changes, and creating a testing tool to simulate PureCloud Widget events like inbound calls and simplify testing events for QA and developers.
- Revamped the date picker component and other shared components to use ControlValueAccessor and Angular Material to implement a better reusable component, fix the issue with form control getting detached, and remove usage of a deprecated third-party library. As part of this work, the date adapter of the app was also migrated from MomentDateAdapter to LuxonDateAdapter, and moment.js was replaced with luxon.js.

Macquarie Group Services, Inc.

Makati City, Philippines

Front-end Engineer / Stream Lead

September 2019 - March 2025

- Worked closely with product owners, business analysts, and designers to review requirements and ensure alignment with business goals.
- Led cross-functional feature teams in an Agile environment, ensuring timely delivery of more than 30 payment and deposit system features for financial advisers.
- Integrated multi-factor authentication for updating passwords, generating credentials, and browser registration for better risk and security prevention from fraud activities.
- Collaborated with the Salesforce team to successfully integrate live chat, providing an additional, more efficient communication channel for clients.

-
- Led the integration of component tests and E2E tests using Storybook and Cypress that reduced the overall effort for manual regression testing during major dependency upgrades and complex code changes.
 - Streamlined onboarding process for new developers, contributing to Agile team efficiency and continuous improvement.
 - Developed features using different state management solutions like service with subjects and NgRx store.
 - Played a major role in framework migration from AngularJS to Angular 5 to comply with security and tech risk and for a more performant application and a better developer experience.
 - Contributed to the team's CI/CD pipeline by creating and maintaining scripts and jobs with Bamboo and Bitbucket Cloud.
 - Performed production support with the responsibilities of managing incidents, investigating the issue, and engaging all impacted teams to put together a resolution.
 - Worked as a full-stack engineer who supported a legacy wealth system for generating aggregated portfolio review reports using AngularJS for the frontend and Java Spring and Apache Maven for backend development.

Fujitsu Philippines Global Delivery Center

Application System Engineer / Full-stack Engineer

Taguig City, Philippines

March 2016 - August 2019

- Demonstrated initiative by taking on a QA support management role to ensure project success.
- Managed to adapt to new technologies for every new project and learn the Japanese language in a short time.
- Led the development of a web application using Java Spring Boot and MySQL. The said application digitalised paper-based processes and replaced a legacy system of the client.
- Designed a user interface, developed prototypes, and did proof of concepts for an application that translates AI-generated data into graphs using AngularJS and Angular Material.
- Led the development team of 6 to create a full-stack application using proprietary software based on Java Spring Boot for a sports betting site.
- Assigned as Technology Skill Improvement and Technology Leader with the responsibility of facilitating a bootcamp for new grads for technical and soft skills improvement and actual project development preparation

Certificate

GCP - Associate Cloud Engineer Certification

Achievements

Awarded for Digital Transformation in Workplace by Fujitsu Philippines in PH GDC Ideathon

Awarded as Best Team Player of 2018 by Fujitsu Philippines

GPSU award - 2017 Excellent Member

Education

Polytechnic University of the Philippines

Bachelor of Science in Computer Engineering

Manila, Philippines
